DATE: November 5, 2021

SUBJECT: Annual Street Condition Report

Each year, representatives from the Engineering and Public Services Departments (this year consisting of Bill Walters, Superintendent of Public Services, and me) drive each block of street within the City, and rate both the street and curb conditions, compiling the results for preparation of the next year's Capital Improvements Program. This also affords us an opportunity to note any unusual defects, and recommend candidate projects for maintenance treatments like microsurfacing, spray patching, and crack sealing. While no system of subjective rating is perfect, this rating scheme has been in use for more than 30 years, and generally provides a consistent result City-wide. In addition, the State of Michigan has approved of our process, and considers it to be a bona fide asset management program, such that we can freely transfer funding between Major and Local Streets at will. We are fortunate that the mileage of "poor" streets (generally considered to be those with an overall condition rating of 8.0 or worse) has been holding steady for several years, with a major improvement in 2021 versus 2020. At present, the mileage of improved streets with a combined condition rating of 8.0 or worse stands at 2.29 miles in 2021, compared with 3.54 in 2020, 3.55 in summer 2019, 3.09 in fall 2017, 3.85 miles in 2016, and 5.91 miles ten years' prior in 2011. I feel this positive trend is the result of a deliberate attempt by our present Council and previous ones to prioritize streets projects from the General fund, and this will be even more accelerated by the passage by our voters of the 2-mil streets levy in November 2020, which is already paying huge dividends.

The Engineering Department typically will prepare cost estimates for the worst streets, and present multiple projects to the City Council for funding. Some projects will be deferred for a multitude of reasons, such as their status as a Federally-eligible route (these need to be scheduled to make maximum use of our annual allotment while providing at least a 20% local match), utility projects that must be completed first, extremely low-volume roadways, etc. We generally do not prioritize projects based on strict geographic balance, though the ability of motorists to avoid poor roadways with nearby parallel routes in good condition is considered to some degree. Additionally, we do rate and report on City-owned parking lots and paved alleys, though funding for those sites is more sporadic than roadways, since they are not eligible for improvement through Public Act 51, which funds maintenance and construction on public streets. For 2022, given the tight construction market, we will likely be making a strong attempt to "get out of the gate strong" early in the year as we did in 2021, so some of the projects chosen may again be tilted toward those that can be designed and constructed with a shorter turnaround. The report and map will be posted on our web page for public accessibility as well. Please let me know if you should have any questions.

Street Condition Report

Includes:

Street Pavement Condition Rating
Alley Pavement Condition Rating
Parking Lot Conditions Rating
Street Conditions Map
Previous Ten-Year Projects Map

2021-2022

PREPARED FOR:

*The City of Monroe and its citizens and visitors
120 East First Street
Monroe, Michigan 48161*

*Patrick M. Lewis, P.E.
Director of Engineering and Public Services
120 East First Street
Monroe, Michigan 48161
November, 2021*

INTRODUCTION

Every year the Department of Engineering and Public Services evaluates the condition of all the pavement and curbs in the city and compiles a report. The street segments that will be selected for improvement during the upcoming fiscal year are based on their rating on the condition index. Each street segment is reviewed for reconstruction, resurfacing, or maintenance treatments, and is prioritized by the severity of the deterioration. Street surfaces are inspected and each is rated between the limits of "Excellent" and "Critical" depending on such factors as rideability, cracking, deformation, and appearance. A point value is assigned for each street segment, which is between "0" for "Excellent" and "10" for virtually impassable. Streets designated as Major streets under Public Act 51 are given an additional point because of their importance. Streets with base failures are also given another point, due to their potential to undermine the overall street structure. Curb conditions are also inspected on each street and each section is rated between the limits of "0" for "Excellent" to "3" for "Very Poor", with streets totally lacking curbs rated a "4". When the point values for each condition are totaled, the resulting sum indicates an index number for the street block. Finally, the street blocks are combined into logical sections and averaged to produce an "Average Index Number". Ideally, curb replacement and/or resurfacing will first occur on those streets or street sections having the highest average index, though this is influenced by other factors such as needed utility work, traffic, maintenance costs, and eligibility for Federal funding.

The importance of providing well-maintained street surfaces with effective and adequate curbing cannot be over-emphasized. High-quality pavements are necessary for safe travel by the motorizing public and also provide for reduced vehicle operating and maintenance costs. In urbanized areas, effective curbing is necessary for proper drainage, increases pedestrian safety, assists in various public service activities, and prolongs the life expectancy of the roadway. It is equally important to provide proper and timely maintenance in order to protect the estimated \$150-\$200 million investment that our street network represents. Five (5) segments of roadway are considered to be unimproved, and these are likely to remain so as all but one (1) are short sections serving only single adjacent properties.

**2021-22 STREET SURVEY SUMMARY
BY
AVERAGE INDEX NUMBER**

STREET	FROM	TO	LENGTH	CLASS
<u>AVERAGE INDEX 12.1 to 15.0</u>				
Conant Avenue*	Front	First	405.00	Local

Sackett Avenue	E. Noble to E. Lorain	831.00'	1,662.00'
Telb Street	E. of Railroad to Ternes	663.00'	1,326.00'
Ternes Drive	N. of Telb to S. of N. Dixie	2,019.00'	4,038.00'
Theadore Drive	W. Noble to Donnalee	627.07'	1,254.14'
Washington Street	E. Third to E. First	732.00'	402.60'
TOTAL		15,380.62'	24,181.58'

*Denotes Federal-Aid Project (formula allocation).

Total Length of Resurfacing / Reconstruction: 2.91 miles

Total Length of Curb Placed: 4.58 miles

Of the 82.58 miles of City streets, all but 0.73 miles are considered improved, which includes four one-block platted roadway stubs and a long section of Spaulding Road north of North Dixie Highway. Of the improved streets, about one third (1/3) are asphalt over concrete, one third (1/3) are asphalt over aggregate, and one third (1/3) are concrete. Of these, 2.29 miles are rated poor when curb and roadway conditions are combined and should be resurfaced or reconstructed in the near future. There are also 0.61 miles of improved streets (East Front Street between the Canadian National Railroad and Link Street and Jones Avenue from just east of Custer Street to LaPlaisance Road) and 0.73 miles of unimproved streets that lack curbs. Since the curb conditions are factored into the average index, improved roadways lacking curbs are already figured into the poor street mileage.

Each year since 2003, the City has received “entitlement” Federal funding through the Surface Transportation Program of up to \$400,000, though based on ongoing inadequate Federal appropriations and a decline in population versus other communities nationwide, this entitlement number dropped to around \$250,000 for 2021. For 2021, the Engineering Department had planned to utilize these monies to microsurface North Dixie Highway from Elm Avenue to Spaulding Road and East Elm Avenue from Monroe Street to Dixie Highway. This project was awarded to a contractor, but due to scheduling conflicts was postponed until 2022. The City’s 2022 project, which will also pull forward our 2023 funding through the “advance construct” process, is intended to be the resurfacing and spot curb replacement of Riverview Avenue from Maywood Avenue to Cole Road.

In November 2020, the City’s voters approved the dedication of 2 mils of revenue to be used exclusively toward the repair and maintenance of streets and sidewalks / greenways. This millage will be assessed annually over a 15-year period and should allow the City to make large inroads on its backlog of projects within a few years. Short-term bonding was used in 2021 to combine work into larger and more cost effective bid packages, and to facilitate cash flow for earlier season bidding in future years. By making use of aggressive early-season bidding and large, attractive bid packages, substantial savings was realized in 2021, and this strategy will continue in the future. As a comprehensive study by the Engineering Department in 2006 identified greater than a 1-mil annual deficiency in roadway funding, the combination of construction inflation consistently outpacing general inflation during much of the past 20 years and the further erosion of the City’s industrial tax base since that time, the actual deficiency today likely approaches this 2-mil figure, so this additional funding is very much needed and appreciated.
